

Biodiversity Finance Metrics for Impact Reporting

Supplement to IFC Biodiversity Finance Reference Guide

Biodiversity Finance Metrics for Impact Reporting

Supplement to IFC Biodiversity Finance Reference Guide

In partnership with:

In collaboration with: Taskforce on Nature-related Financial Disclosures

About IFC

IFC – a member of the World Bank Group – is the largest global development institution focused on the private sector in emerging markets. We work in more than 100 countries, using our capital, expertise, and influence to create markets and opportunities in developing countries. In fiscal year 2024, IFC committed a record \$56 billion to private companies and financial institutions in developing countries, leveraging private sector solutions and mobilizing private capital to create a world free of poverty on a livable planet. Annex II: The Taskforce on Nature-related Financial Disclosures' Core and Additional Global Disclosure Metrics	56

Foreword

Biodiversity – vital to a healthy planet, our economies, and livelihoods – is deteriorating worldwide at unprecedented rates. The landmark Kunming-Montreal Global Biodiversity Framework, reached in December 2022, presented an urgent and necessary shift in the global approach to tackling biodiversity loss. It calls for a whole-of-economy approach to halt and reverse biodiversity loss by 2030 by shifting to new ways of producing and consuming. This is a tall order to transform our \$90 trillion global economy, and it simply cannot be achieved without the private sector and private capital.

IFC released its flagship **Biodiversity Finance Reference Guide** in November 2022 to help investors and companies identify opportunities to shift to new restorative business models and production practices, with the aim to unlock the \$10.1 trillion annual business opportunity¹ in the sustainable transition across the food, energy, and infrastructure sectors. This first-of-its-kind guide leverages the power of the multitrillion² sustainable finance market to provide guidance on eligible activities that constitute biodiversity finance and maps the contribution of each of these activities to the Global Biodiversity Framework targets.

With the increased market interest in nature and biodiversity finance, there is now demand for guidance on impact reporting as data collection and attribution remain challenging. I am pleased to present this **supplement** that enhances IFC's Biodiversity Finance Reference Guide to include impact reporting metrics for each eligible activity. The supplement supports issuers and borrowers in reporting on impact across individual projects and wider portfolios. Transparency and credibility of impact reporting are essential to enabling markets to efficiently transition to nature-smart approaches and to attracting private capital at scale.

We are grateful to BNP Paribas, the Finance for Biodiversity Foundation, Natixis CIB, the Taskforce on Nature-related Financial Disclosures, and the Wildlife Conservation Society for reviewing and supporting the development of this timely market contribution to enhancing transparency and accountability in impact reporting for biodiversity finance.

IFC's intent is to provide a practical tool to advance the growth of the biodiversity finance market and to help empower the private sector to accelerate the transition toward naturesmart growth that meets the targets of the Global Biodiversity Framework and our shared vision of living in harmony with nature by 2050.

Jamie Fergusson

Acknowledgments

This supplement to IFC's Biodiversity Finance Reference Guide was developed by IFC's Climate Business Department in collaboration with BNP Paribas, the Finance for Biodiversity Foundation, Natixis CIB, the Taskforce on Nature-related Financial Disclosures, and the Wildlife Conservation Society.

Under the leadership of Jamie Fergusson, the IFC Climate Business Department team includes Irina Likhachova (project lead), Helena Dill (technical lead), Francisco Avendaño, and Beatrice Phillips. The following IFC staff provided further valuable contributions: Veronica Nyhan Jones, Lori Anna Conzo, Maria Estella Nucci, Justin Bishop, Vladimir Steneck, Khondoker Tanveer Haider, Dennis Peter Bours, Bilal Rahill, Katherine Koh, Dmytro Vintsevych, Nina Zegger, Ahmad Slaibi, and William Beloe.

The BNP Paribas team includes Andres Araguas, Michael Bellantoni, Agnes Gourc, Camille Maclet, Nicolas Rydarowicz, Julia Samson, Sabina Veksler, and Myriam Zapata.

The Finance for Biodiversity Foundation team includes Natacha Boric and Julen Gonzalez Redin.

The Natixis CIB team includes Gratien Davasse.

The Taskforce on Nature-related Financial Disclosures team includes Laura Clavey, Fiona Pedeboy, Blanche de Biolley, Tom Hegarty, and Alan Marini.

The Wildlife Conservation Society team includes Ray Victurine and Benjamin Hoyer.

The development of this supplement received support from the Green Bond Technical Assistance Program, a multi-donor program managed and administered by IFC to promote green bond issuance from emerging-market financial institutions. The program is funded by the Swiss State Secretariat for Economic Affairs, the Swedish International Development Cooperation Agency, and the Ministry of Finance of Luxembourg.

Biodiversity Finance Metrics for Impact Reporting

Supplement to IFC Biodiversity Finance Reference Guide

Summary

This supplement to IFC's Biodiversity Finance Reference Guide is designed to provide expanded guidance on impact reporting for eligible biodiversity finance activities. The guide builds on established recommendations outlined in the International Capital Market Association's (ICMA's) Green Bond Principles³ and in the Green Loan Principles^{4,5} to provide indicative investment activities and project components eligible for biodiversity finance. Impact reporting is one of the four core components required for alignment with the Green Bond and Loan Principles and seeks to ensure transparency and accountability. This supplement aims to facilitate effective impact reporting by offering indicative metrics for each eligible biodiversity finance activity identified in the guide. Considering the evolving landscape of sustainable finance, this document also

offers preliminary considerations on the potential applicability of these metrics to sustainability-linked financing instruments.

To develop this supplement, IFC collaborated with the Finance for Biodiversity Foundation, BNP Paribas, Natixis, the Taskforce on Nature-related Financial Disclosures (TNFD), and the Wildlife Conservation Society. The metrics are informed by current best practices in the market for reporting, such as the ICMA Handbook – Harmonized Framework for Impact Reporting,⁶ the Harmonized Indicators for Private Sector Operations,⁷ and the TNFD's recommended core and additional global disclosure metrics⁸ as well as the TNFD's core and additional sector metrics.⁹

Impact Reporting

About IFC's Biodiversity Finance Reference Guide

IFC's Biodiversity Finance Reference Guide is the world's first guidance to financial institutions, investors, and companies on the specific types of investments, activities, and project components that constitute biodiversity finance. It can also be used by policy makers to design biodiversity finance taxonomies. While the Green Bond and Loan Principles acknowledge biodiversity as an eligible use of proceeds, they lack the granular detail necessary to identify suitable projects and activities that would fit this category. The guide addresses this gap by providing an indicative list of investment activities that contribute to the protection, maintenance, or enhancement of biodiversity and ecosystem services, as well as the sustainable management of living natural resources. Such biodiversity finance investment activities and project components are organized into the following three main categories:

- Investments that generate biodiversity co-benefits: Financing that seeks to address the key drivers of biodiversity loss (land/sea use change; pollution; overexploitation of resources; and invasive species)¹⁰ in economic activity and/or contribute to halting and reversing biodiversity loss.
- **Investments in biodiversity conservation and restoration:**Financing to support nature conservation or restoration and related services as a primary objective of investment.
- **Investments in nature-based solutions:** Financing to support the integration of nature-based solutions into larger projects to provide infrastructure services and displace or complement gray infrastructure.

The guide also aligns such eligible investment activities with other nature-related environmental objectives of the Green Bond and Loan Principles: (i) pollution prevention and control, (ii) natural resource conservation, (iii) climate change mitigation, and (iv) climate change adaptation. The aim is to highlight where biodiversity finance activities can have multiple co-benefits to enable investors to choose which primary environmental category to report against while being able to tag other categories as additional co-benefits.

Furthermore, each eligible activity is mapped to specific targets of the Kunming-Montreal Global Biodiversity Framework.¹¹ This alignment ensures that the guide supports the mobilization of

financial resources in line with Target 19 of the Global Biodiversity Framework. Additionally, it serves as a valuable resource for policy makers, facilitating the development of biodiversity finance taxonomies and policies that contribute to Target 14's call for the integration of biodiversity across all sectors, including by aligning financial flows.

The guide follows the four core components of the Green Bond and Loan Principles – use of proceeds, process for project evaluation and selection, management of proceeds, and reporting. It makes a significant contribution to the use of proceeds component with an indicative list of biodiversity finance investment activities and project components as well as addressing the other three core components at a high level. For the reporting core component, the guide provides a high-level recommendation based on market practices for issuers or borrowers to make all reasonable efforts to develop metrics and gather data for impact reporting on biodiversity finance use of proceeds.

About IFC's Biodiversity Finance Metrics for Impact Reporting

Since the publication of the updated IFC Biodiversity Finance Reference Guide in May 2023, there has been growing demand from the market for more comprehensive guidance on impact reporting for biodiversity finance activities. This supplement responds to the demand and serves as a companion resource to the original guide.

It expands on the preliminary impact reporting guidance provided in the guide and suggests specific metrics for each of the investment activities and project components laid out in Table 1. The intention is to provide guidance to issuers and borrowers on metrics that could be used for impact reporting purposes to strengthen alignment with the reporting core component of of the Green Bond and Loan Principles. The document draws on and aligns with the latest market practices wherever possible.

This supplement is not intended to provide an exhaustive list of metrics but rather to function as a complementary resource to be adapted to regional and local contexts. The specific details and local circumstances of individual projects significantly influence their results and metrics. To accurately assess impacts, site-specific indicators related to habitats or species of concern may need to be developed.

¹⁰ Climate change is also considered to be a key driver of biodiversity loss. However, there are well-developed taxonomies for investments and investment activities that target climate change, which are not covered in the guide. The guide only lists those climate-related activities that have significant localized biodiversity benefits

¹¹ Annex I includes a list of the Global Biodiversity Framework targets for ease of reference.

In addition, metrics should be established during the design phase of investment activities and project components to ensure that information can be collected from the beginning and outcomes can be measured against a baseline. Reporting should encompass biodiversity metrics as well as relevant performance and social impact metrics, where applicable.¹²

The metrics supplement is intended to be applied to individual projects for use of proceeds instruments. However, it can be used when investors need to report impact on a portfolio level. The proposed metrics can serve as a directory to identify the most relevant indicators that could be applied across projects and assets that seek to achieve similar environmental objectives and/or share similar features and, thus, could be aggregated on a portfolio level.

Metrics for Impact Reporting

Table I expands on IFC Biodiversity Finance Reference Guide mapping of eligible biodiversity finance activities to environmental objectives of the Green Bond and Green Loan Principles and their direct and indirect contribution to the targets of the Global Biodiversity Framework. Table I adds sample metrics for each of the eligible activities listed in the guide. These metrics constitute the numerical units of measurement to capture outputs, outcomes, and impacts of the activity. For those activities that seek improvements as the main outcome, Table 1 notes a requirement to gather a baseline measurement that captures the state of the relevant metric before the intervention. Where feasible, the table includes available market benchmarks (sector or geography based) that can serve as important reference points to gauge the level of impact achieved when compared against existing requirements and standards.

In addition, the suggested metrics are mapped to the core and additional disclosure metrics recommended by the TNFD.¹³ This mapping aims to maximize synergies between metrics used for impact reporting on the positive results of biodiversity finance activities (as outlined in this document) and those employed for

corporate disclosures on nature-related dependencies and impacts that constitute financial risks and opportunities (as per TNFD recommendations). Annex II of this supplement includes the TNFD's core and additional global disclosure metrics for ease of reference. The TNFD's core and additional sector metrics can be found on the TNFD website, in the Additional Guidance by sector.

Application of Metrics to Sustainability-Linked Financing Instruments

In the dynamic sustainable finance space, sustainability-linked financing instruments¹⁶ have gained significant traction in funding exercises and incentivizing issuers to contribute to sustainability from an environmental, social, and/or governance perspective. There is growing interest in applying sustainability-linked financing to biodiversity finance in particular. This section offers initial considerations for issuers contemplating sustainability-linked instruments with objectives specifically focused on addressing the key drivers of biodiversity loss as well as conserving and restoring nature.

The existing Sustainability-Linked Bond Principles¹⁷ and Sustainability-Linked Loan Principles^{18,19} provide comprehensive recommendations for developing robust sustainability-linked financing instruments. These principles underscore the need to identify key performance indicators (KPIs) that address outstanding issues that are material to the issuer's sustainability performance and business activities.

When selecting KPIs for sustainability-linked financing intended to address one or more of the key drivers of biodiversity loss and/or conserve and restore nature, issuers should adhere to the general recommendations of the Sustainability-Linked Bond and Loan Principles. These recommendations include:

 Relevance, materiality, and context: The selected KPIs must be directly relevant and material to the issuer's operations and environmental impact, considering the specific context in which the entity operates.

- 12 For example, an increase in natural forest cover or hectares protected.
- 13 https://tnfd.global/.
- 14 https://tnfd.global/recommendations-of-the-tnfd/.
- ${\tt 15} \quad \underline{https://tnfd.global/tnfd-publications/?_sft_framework-categories=additional-guidance-by-sector\#search-filter.} \\$
- 16 Instruments where financial and/or other structural characteristics can change based on the issuer's achievement of predefined sustainability objectives.
- 17 <u>Sustainability-Linked Bond Principles</u>, by ICMA. Available at <a href="https://www.icmagroup.org/sustainable-finance/the-principles-guidelines-and-handbooks/sustainable-finance/the-principles-guidelines-guidelines-guidelines-guidelines-guidel
- 18 <u>Sustainability-Linked Loan Principles</u>, by the Asia Pacific Loan Market Association, the Loan Market Association, and the Loan Syndications and Trading Association. Available at https://www.lsta.org/content/sustainability-linked-loan-principles-sllp/.
- 19 Hereafter, referred to as the Sustainability-Linked Bond and Loan Principles.

- Sustainability strategy: KPIs should be consistent with the issuer's sustainability strategy, business direction, and corporate policies.
- Practicality: KPIs should be based on clear, objective data
 that can be accurately and feasibly measured as well as
 tracked over time. The issuer should have at least three years
 of KPI time series to be able to determine a documented
 baseline that can be used to define an ambitious target. In
 the absence of the selected KPI time series, the strategy
 should consider data collection to document a baseline
 during the first three years of the strategy.
- Benchmarking: To the extent possible, metrics should follow industry-recognized standards where benchmarking can be performed and the level of ambition assessed.²⁰
- Verifiability: The data and outcomes associated with the KPIs should be externally verifiable to ensure transparency and accountability.

In addition to the general recommendations, the following biodiversity-related factors can be considered when selecting KPIs for an issuance specifically focused on addressing one or more of the key drivers of biodiversity loss:

- Nature- and biodiversity-related dependencies:
 Assessing the reliance on natural ecosystems and resources, and how these dependencies can be managed or mitigated through KPIs.
- **Impact measurement:** Defining and measuring the direct and indirect impacts of operations or activities on biodiversity and nature and developing KPIs that effectively address these impacts.
- Sector-specific considerations: Tailoring the KPIs to reflect the unique biodiversity challenges and opportunities within a specific industry sector and/or geographic scope.

The metrics presented in this supplement for use of proceeds instruments can serve as the starting point for issuers that intend to use sustainability-linked instruments with objectives related to addressing the key drivers of biodiversity loss and advancing the conservation and restoration of nature. Such metrics can provide insights into the development of KPIs that meet the market expectations of relevance, measurability, and quantifiable impact.²¹ This supplement can also be used to assist issuers in reviewing existing biodiversity commitments.

To illustrate, a water utility company may incorporate the implementation of nature-based solutions for water management into its sustainability strategy for the coming years. These nature-based solutions may involve using wetlands to enhance water quality instead of traditional gray infrastructure solutions. A sustainability-linked bond or loan could be used to fund this strategy. Inspired by the metrics presented in Table 1, potential KPIs may include (i) area covered by nature-based solution (in ha and % of total area under land management practices and/or infrastructure area; increase in %), or (ii) area of wetlands created, rehabilitated, or restored (in ha and % of total area; increase in %). The respective sustainability performance targets would have to be ambitious compared to the documented baseline of the selected KPIs. Where industry or science-based pathway benchmarking is not feasible, the company would be encouraged to provide contextual information on performance to ensure the ambition level is adequately assessed.

Another example is a forestry company aiming to increase the portion of land it dedicates to conservation and restoration beyond legal requirements as part of its sustainability strategy. These efforts could encompass restoring and connecting fragmented preserved areas, which contribute to addressing the key driver of land-use change. In this case, potential KPIs for the company's sustainability-linked instrument may include (i) area of land under conservation practices (above legislation requirements) or recognized as legally protected (in ha and % of total area; increase in %), and/or (ii) area of land restored or rehabilitated (in ha and % of total area; increase in %). As in the previous example, the respective sustainability performance targets would have to be ambitious compared to the documented baseline of the selected KPIs.

Sustainability-linked structures aimed at supporting biodiversity-related objectives would benefit from the development of KPIs tailored for specific sectors. As this area could significantly enrich the available toolkit for issuers and contribute to the advancement of biodiversity finance, IFC will consider developing further guidance on the topic and may provide more tailored guidance for KPI selection.

²⁰ To the extent globally recognized standards or references for benchmarking are not available, it is recommended that issuers supplement KPIs with additional relevant contextual information, where feasible.

²¹ Within ICMA's guidance, an illustrative KPI registry including an array of biodiversity KPIs is also available.

Conclusion

The purpose of this document is to scale the biodiversity finance market and promote transparency and accountability. It provides a practical tool for investors and corporations to measure the impact of investments that seek to protect, maintain, or enhance biodiversity and ecosystem services to transition to nature-smart economies. This transformation of economic activity is crucial to halt and reverse biodiversity loss to meet the targets of the Global Biodiversity Framework.

Annex I: Kunming-Montreal Global Biodiversity Framework's Targets

GOAL A

The integrity, connectivity and resilience of all ecosystems are maintained, enhanced, or restored, substantially increasing the area of natural ecosystems by 2050;

Human induced extinction of known threatened species is halted, and, by 2050, extinction rate and risk of all species are reduced tenfold, and the abundance of native wild species is increased to healthy and resilient levels;

The genetic diversity within populations of wild and domesticated species is maintained, safeguarding their adaptive potential.

Target 1	Ensure that all areas are under participatory integrated and biodiversity inclusive spatial planning and/ or effective management processes addressing land and sea use change, to bring the loss of areas of high biodiversity importance, including ecosystems of high ecological integrity, close to zero by 2030, while respecting the rights of indigenous peoples and local communities.
Target 2	Ensure that by 2030 at least 30 per cent of areas of degraded terrestrial, inland water, and marine and coastal ecosystems are under effective restoration, in order to enhance biodiversity and ecosystem functions and services, ecological integrity and connectivity.
Target 3	Ensure and enable that by 2030 at least 30 per cent of terrestrial and inland water areas, and of marine and coastal areas, especially areas of particular importance for biodiversity and ecosystem functions and services, are effectively conserved and managed through ecologically representative, well-connected and equitably governed systems of protected areas and other effective area-based conservation measures, recognizing indigenous and traditional territories, where applicable, and integrated into wider landscapes, seascapes and the ocean, while ensuring that any sustainable use, where appropriate in such areas, is fully consistent with conservation outcomes, recognizing and respecting the rights of indigenous peoples and local communities including over their traditional territories.
Target 4	Ensure urgent management actions, to halt human induced extinction of known threatened species and for the recovery and conservation of species, in particular threatened species, to significantly reduce extinction risk, as well as to maintain and restore the genetic diversity within and between populations of native, wild and domesticated species to maintain their adaptive potential, including through in situ and ex situ conservation and sustainable management practices, and effectively manage human-wildlife interactions to minimize human-wildlife conflict for coexistence.
Target 5	Ensure that the use, harvesting and trade of wild species is sustainable, safe and legal, preventing overexploitation, minimizing impacts on non-target species and ecosystems, and reducing the risk of pathogen spill-over, applying the ecosystem approach, while respecting and protecting customary sustainable use by indigenous peoples and local communities.
Target 6	Eliminate, minimize, reduce and or mitigate the impacts of invasive alien species on biodiversity and ecosystem services by identifying and managing pathways of the introduction of alien species, preventing the introduction and establishment of priority invasive alien species, reducing the rates of introduction

and establishment of other known or potential invasive alien species by at least 50 percent, by 2030,

eradicating or controlling invasive alien species especially in priority sites, such as islands.

Target 7

Reduce pollution risks and the negative impact of pollution from all sources, by 2030, to levels that are not harmful to biodiversity and ecosystem functions and services, considering cumulative effects, including:

- (a) by reducing excess nutrients lost to the environment by at least half, including through more efficient nutrient cycling and use;
- **(b)** by reducing the overall risk from pesticides and highly hazardous chemicals by at least half, including through integrated pest management, based on science, taking into account food security and livelihoods; and
- **(c)** by preventing, reducing, and working towards eliminating plastic pollution.

Target 8

Minimize the impact of climate change and ocean acidification on biodiversity and increase its resilience through mitigation, adaptation, and disaster risk reduction actions, including through nature-based solution and/or ecosystem-based approaches, while minimizing negative and fostering positive impacts of climate action on biodiversity.

GOAL B

Biodiversity is sustainably used and managed and nature's contributions to people, including ecosystem functions and services, are valued, maintained and enhanced, with those currently in decline being restored, supporting the achievement of sustainable development, for the benefit of present and future generations by 2050.

Target 9

Ensure that the management and use of wild species are sustainable, thereby providing social, economic and environmental benefits for people, especially those in vulnerable situations and those most dependent on biodiversity, including through sustainable biodiversity-based activities, products and services that enhance biodiversity, and protecting and encouraging customary sustainable use by indigenous peoples and local communities.

Target 10

Ensure that areas under agriculture, aquaculture, fisheries and forestry are managed sustainably, in particular through the sustainable use of biodiversity, including through a substantial increase of the application of biodiversity friendly practices, such as sustainable intensification, agroecological and other innovative approaches contributing to the resilience and long-term efficiency and productivity of these production systems and to food security, conserving and restoring biodiversity and maintaining nature's contributions to people, including ecosystem functions and services.

Target 11

Restore, maintain and enhance nature's contributions to people, including ecosystem functions and services, such as the regulation of air, water, and climate, soil health, pollination and reduction of disease risk, as well as protection from natural hazards and disasters, through nature-based solutions and ecosystem-based approaches for the benefit of all people and nature.

Target 12

Significantly increase the area and quality and connectivity of, access to, and benefits from green and blue spaces in urban and densely populated areas sustainably, by mainstreaming the conservation and sustainable use of biodiversity, and ensure biodiversity-inclusive urban planning, enhancing native biodiversity, ecological connectivity and integrity, and improving human health and well-being and connection to nature and contributing to inclusive and sustainable urbanization and the provision of ecosystem functions and services.

GOALC

The monetary and non-monetary benefits from the utilization of genetic resources and digital sequence information on genetic resources, and of traditional knowledge associated with genetic resources, as applicable, are shared fairly and equitably, including, as appropriate with indigenous peoples and local communities, and substantially increased by 2050, while ensuring traditional knowledge associated with genetic resources is appropriately protected, thereby contributing to the conservation and sustainable use of biodiversity, in accordance with internationally agreed access and benefit-sharing instruments.

Target 13

Take effective legal, policy, administrative and capacity-building measures at all levels, as appropriate, to ensure the fair and equitable sharing of benefits that arise from the utilization of genetic resources and from digital sequence information on genetic resources, as well as traditional knowledge associated with genetic resources, and facilitating appropriate access to genetic resources, and by 2030 facilitating a significant increase of the benefits shared, in accordance with applicable international access and benefit-sharing instruments.

GOAL D

Adequate means of implementation, including financial resources, capacity-building, technical and scientific cooperation, and access to and transfer of technology to fully implement the Kunming-Montreal Global Biodiversity Framework are secured and equitably accessible to all Parties, especially developing country Parties, in particular the least developed countries and small island developing States, as well as countries with economies in transition, progressively closing the biodiversity finance gap of \$700 billion per year, and aligning financial flows with the Kunming-Montreal Global Biodiversity Framework and the 2050 Vision for Biodiversity.

Target 14

Ensure the full integration of biodiversity and its multiple values into policies, regulations, planning and development processes, poverty eradication strategies, strategic environmental assessments, environmental impact assessments and, as appropriate, national accounting, within and across all levels of government and across all sectors, in particular those with significant impacts on biodiversity, progressively aligning all relevant public and private activities and fiscal and financial flows with the goals and targets of this Framework.

Target 15

Take legal, administrative or policy measures to encourage and enable business, and in particular to ensure that large and transnational companies and financial institutions:

- (a) Regularly monitor, assess, and transparently disclose their risks, dependencies and impacts on biodiversity including with requirements for all large as well as transnational companies and financial institutions along their operations, supply and value chains and portfolios;
- **(b)** Provide information needed to consumers to promote sustainable consumption patterns;
- **(c)** Report on compliance with access and benefit-sharing regulations and measures, as applicable; in order to progressively reduce negative impacts on biodiversity, increase positive impacts, reduce biodiversity-related risks to business and financial institutions, and promote actions to ensure sustainable patterns of production.

Target 16	Ensure that people are encouraged and enabled to make sustainable consumption choices including by establishing supportive policy, legislative or regulatory frameworks, improving education and access to relevant and accurate information and alternatives, and by 2030, reduce the global footprint of consumption in an equitable manner, halve global food waste, significantly reduce overconsumption and substantially reduce waste generation, in order for all people to live well in harmony with Mother Earth.						
Target 17	Establish, strengthen capacity for, and implement in all countries biosafety measures as set out in Article 8(g) of the Convention on Biological Diversity and measures for the handling of biotechnology and distribution of its benefits as set out in Article 19 of the Convention.						
Target 18	Identify by 2025, and eliminate, phase out or reform incentives, including subsidies harmful for biodiversity, in a proportionate, just, fair, effective and equitable way, while substantially and progressively reducing them by at least \$500 billion per year by 2030, starting with the most harmful incentives, and scale up positive incentives for the conservation and sustainable use of biodiversity.						
Target 19	Substantially and progressively increase the level of financial resources from all sources, in an effective, timely and easily accessible manner, including domestic, international, public and private resources, in accordance with Article 20 of the Convention, to implement national biodiversity strategies and action plans, mobilizing at least \$200 billion per year by 2030, including by:						
	(a) Increasing total biodiversity related international financial resources from developed countries, including official development assistance, and from countries that voluntarily assume obligations of developed country Parties, to developing countries, in particular the least developed countries and small island developing States, as well as countries with economies in transition, to at least \$20 billion per year by 2025, and to at least \$30 billion per year by 2030;						
	(b) Significantly increasing domestic resource mobilization, facilitated by the preparation and implementation of national biodiversity finance plans or similar instruments according to national needs, priorities and circumstances;						
	(c) Leveraging private finance, promoting blended finance, implementing strategies for raising new and additional resources, and encouraging the private sector to invest in biodiversity, including through impact funds and other instruments;						
	(d) Stimulating innovative schemes such as payment for ecosystem services, green bonds, biodiversity offsets and credits, and benefit-sharing mechanisms, with environmental and social safeguards;						
	(e) Optimizing co-benefits and synergies of finance targeting the biodiversity and climate crises;						
	(f) Enhancing the role of collective actions, including by indigenous peoples and local communities, Mother Earth centric actions and non-market-based approaches including community based natural resource management and civil society cooperation and solidarity aimed at the conservation of biodiversity;						
	(g) Enhancing the effectiveness, efficiency and transparency of resource provision and use.						
Target 20	Strengthen capacity-building and development, access to and transfer of technology, and promote development of and access to innovation and technical and scientific cooperation, including through South-South, North-South and triangular cooperation, to meet the needs for effective implementation, particularly in developing countries, fostering joint technology development and joint scientific research programmes for the conservation and sustainable use of biodiversity and strengthening scientific research and monitoring capacities, commensurate with the ambition of the goals and targets of the Framework.						

Target 21	Ensure that the best available data, information and knowledge are accessible to decision makers, practitioners and the public to guide effective and equitable governance, integrated and participatory management of biodiversity, and to strengthen communication, awareness-raising, education, monitoring, research and knowledge management and, also in this context, traditional knowledge, innovations, practices and technologies of indigenous peoples and local communities should only be accessed with their free, prior and informed consent, in accordance with national legislation.
Target 22	Ensure the full, equitable, inclusive, effective and gender-responsive representation and participation in decision-making, and access to justice and information related to biodiversity by indigenous peoples and local communities, respecting their cultures and their rights over lands, territories, resources, and traditional knowledge, as well as by women and girls, children and youth, and persons with disabilities and ensure the full protection of environmental human rights defenders.
Target 23	Ensure gender equality in the implementation of the Framework through a gender-responsive approach where all women and girls have equal opportunity and capacity to contribute to the three objectives of the Convention, including by recognizing their equal rights and access to land and natural resources and their full, equitable, meaningful and informed participation and leadership at all levels of action, engagement, policy and decision-making related to biodiversity.

Annex II: The Taskforce on Naturerelated Financial Disclosures' Core and Additional Global Disclosure Metrics

Table II.1: TNFD core global disclosure indicators and metrics for nature-related dependencies and impacts

Metric no.	Driver of nature change	Indicator	Metric
	Climate change	GHG emissions	Refer to ISSB's IFRS-S2 Climate-related Disclosures Standard
C1.0		Total spatial footprint	 Total spatial footprint (km²) (sum of): Total surface area controlled/managed by the organisation, where the organisation has control (km²); Total disturbed area (km²); and Total rehabilitated/restored area (km²).
C1.1	Land/ freshwater/ ocean-use change	Extent of land/freshwater/ ocean-use change	 Extent of land/freshwater/ocean ecosystem use change (km²) by: Type of ecosystem; and Type of business activity. Extent of land/freshwater/ocean ecosystem conserved or restored (km²), split into: Voluntary; and Required by statutes or regulations. Extent of land/freshwater/ocean ecosystem that is sustainably managed (km²) by: Type of ecosystem; and Type of business activity.
C2.0	Pollution/ pollution removal	Pollutants released to soil split by type	Pollutants released to soil (tonnes) by type, referring to sector- specific guidance on types of pollutants.

Metric no.	Driver of nature change	Indicator	Metric
	Climate change	GHG emissions	Refer to ISSB's IFRS-S2 Climate-related Disclosures Standard
C2.1		Wastewater discharged	 Volume of water discharged (m₃), split into: Total; Freshwater; and Other. Including: Concentrations of key pollutants in the wastewater discharged, by type of pollutant, referring to sector-specific guidance for types of pollutants; and Temperature of water discharged, where relevant.
C2.2	Pollution/ pollution removal	Waste generation and disposal	Weight of hazardous and nonhazardous waste generated by type (tonnes), referring to sector-specific guidance for types of waste. Weight of hazardous and nonhazardous waste (tonnes) disposed of, split into: Waste incinerated (with and without energy recovery); Waste sent to landfill; and Other disposal methods. Weight of hazardous and nonhazardous waste (tonnes) diverted from landfill, split into waste: Reused; Recycled; and Other recovery operations.
C2.3	Pollution/ pollution removal	Plastic pollution	Plastic footprint as measured by total weight (tonnes) of plastics (polymers, durable goods and packaging) used or sold broken down into the raw material content. For plastic packaging, percentage of plastics that is: Re-usable; Compostable; Technically recyclable; and Recyclable in practice and at scale.
C2.4		Non-GHG air pollutants	 Non-GHG air pollutants (tonnes) by type: Particulate matter (PM_{2.5} and/or PM₁₀); Nitrogen oxides (NO₂, NO and NO₃); Volatile organic compounds (VOC or NMVOC); Sulphur oxides (SO₂, SO, SO₃, SO_X); and Ammonia (NH₃)

Metric no.	Driver of nature change	Indicator	Metric			
	Climate change	GHG emissions	Refer to ISSB's IFRS-S2 Climate-related Disclosures Standard			
C3.0		Water withdrawal and consumption from areas of water scarcity	Water withdrawal and consumption (m³) from areas of water scarcity, including identification of water source.			
C3.1	Resource use/ replenishment	Quantity of high-risk natural commodities sourced from land/ocean/freshwater	Quantity of high-risk natural commodities (tonnes) sourced from land/ocean/freshwater, split into types, including proportion of total natural commodities. Quantity of high-risk natural commodities (tonnes) sourced under a sustainable management plan or certification programme, including proportion of total high-risk natural commodities.			
C4.0	Invasive alien species and other	Placeholder indicator: Measures against unintentional introduction of invasive alien species (IAS)	Proportion of high-risk activities operated under appropriate measures to prevent unintentional introduction of IAS, or low-risk designed activities.			
		Placeholder indicator: Ecosystem condition	For those organisations that choose to report on state of nature metrics, the TNFD encourages them to report the following indicators, and to refer to the TNFD additional guidance on			
C5.0	C5.0 State of nature	Placeholder indicator : Species extinction risk	 Indicators, and to refer to the TNFD additional guidance on measurement of the state of nature in Annex 2 of the LEAP approach: Level of ecosystem condition by type of ecosystem and busine activity; and Species extinction risk. There are a number of different measurement options for these indicators. The TNFD does not currently specify one metric as there is no single metric that will capture all relevant dimensions o changes to the state of nature and a consensus is still developing. 			

Table II.2: TNFD core global disclosure indicators and metrics for nature-related risks and opportunities

Metric no.	Category	Metric
C7.0		Value of assets, liabilities, revenue and expenses that are assessed as vulnerable to nature-related transition risks (total and proportion of total).
C7.1	Risk	Value of assets, liabilities, revenue and expenses that are assessed as vulnerable to nature-related physical risks (total and proportion of total).
C7.2		Description and value of significant fines/penalties received/litigation action in the year due to negative nature-related impacts.

Metric no.	Category	Metric
C ₇ .3	Opportunity	Amount of capital expenditure, financing or investment deployed towards nature-related opportunities, by type of opportunity, with reference to a government or regulator green investment taxonomy or third-party industry or NGO taxonomy, where relevant.
C7.4	, , ,	Increase and proportion of revenue from products and services producing demonstrable positive impacts on nature with a description of impacts.

Table II.3: TNFD additional global disclosure metrics for dependencies and impacts on nature

Metric no.	Metric category	Indicator	Example metrics	
A1.0	Driver of nature change: Land/ freshwater/ ocean-use change	Intensity of land-use	Land-use intensity (tonnes or litres of output/km²). This will vary by sector context; for example, crop yield (tonnes/km²) for the agriculture sector.	
A2.0		Wastewater treated, reused/recycled or avoided	Volume of wastewater treated, reused or recycled (m³). Reduction in volume of wastewater relative to baseline as a result of technological or process changes (m³).	
A2.1		Waste minimised, reused or recycled	Reduction in waste generated relative to baseline as a result of technological or process changes (tonnes).	
A2.2	Driver of nature change: pollution/pollution	Pollutants removed	Volume of pollutants removed from land, atmosphere, ocean and freshwater (tonnes).	
A2.3	removal	Light and noise pollution	 For example: Percentage of light fixtures that fully cut-off or are fully shielded, or are below 6oW; Intensity of outdoor lighting (lumen/ha); and Average noise level on-site during noisiest part of the day, an hour either side of sunrise and an hour either side of sunset (dB); distance from nearest habitat (m). 	

Metric no.	Metric category	Indicator	Example metrics		
A3.0		Total water consumption and withdrawal	Total volume of water withdrawal and consumption (m³).		
A3.1		Water replenished	Volume of water (m³) replenished to the environment through replenishment programmes (split into total and to areas of water scarcity).		
A3.2	Driver of nature change:	Water reduced, reused or recycled	Total volume (m³) or percentage of water (total, freshwater, other) reduced, reused or recycled.		
A3.3	resource use and	Water loss mitigated	Volume (m³) of water loss mitigated.		
A3.4	replenishment	Area used for the production of natural commodities	Area (km²) that the organisation controls and/or manages that is used for the production of natural commodities from land/ocean/freshwater ecosystems, by type of ecosystem.		
A _{3.5}		Use of wild species	Quantity of wild species (tonnes and/or number of individual specimens, by species) extracted from natural habitats for commercial purposes.		
A4.0	Driver of nature change: Invasive species and other Number/extent of unintentionally introduced species, varieties or strains		Number/extent of unintentionally introduced species, varieties or strains in areas owned, operated, used or financed in priority areas (absolute, presence/absence and/or number removed).		
A5.0		Ecosystem condition	Level of ecosystem condition by type of ecosystem and business activity – refer to TNFD additional guidance on state of nature measurement in Annex 2 of the LEAP approach.		
A5.1		Ecosystem extent	Quantitative measure of ecosystem extent, e.g. change in habitat cover (km²).		
A5.2	State of nature	Ecosystem connectivity	Quantitative measure of ecosystem connectivity, e.g. Singapore Index.		
A _{5.3}		Species extinction risk	Quantitative measure of species extinction risk – refer to TNFD additional guidance on state of nature measurement in Annex 2 of the LEAP approach.		
A5.4		Species population size	Quantitative measure of species population size.		

Metric no.	Metric category	Indicator	Example metrics
A6.o	Ecosystem	Ecosystem services the organisation has an impact on: measurement of the change in the availability and quality of the ecosystem services	See guidance on measuring changes in ecosystem services in the TNFD additional guidance on the LEAP approach.
A6.1	services	Ecosystem services the organisation depends on: measurement of the change in the availability and quality of the ecosystem services	See Measuring changes in ecosystem services in the TNFD additional guidance on the LEAP approach.

Table II.4: TNFD additional global metrics for nature-related risks and opportunities

Metric no.	Risk / opportunity	Category	Metric
A7.0			Value of write-offs and early retirements of assets due to nature-related risks.
A7.1		Multiple	Value of capital expenditure, financing or investment deployed towards nature-related risks.
A8.o			Description and value of assets/total annual revenue dependent on area affected by physical risk.
A8.1			Number of locations/business lines/facilities exposed to physical risk.
A8.2			Value of capital expenditure on infrastructure asset repair or replacement as a result of nature-related loss and damage.
A8.3		Physical risk	Percentage increase in insurance costs due to nature-related loss and damage in the previous year.
A8.4	Risk Transition risk Transition risk Policy		Capital expenditure on adaption due to nature-related physical risks.
A8.5			Costs associated with the relocation of operations and suppliers due to physical nature-related risks.
A8.6			Value of assets, liabilities, revenue and expenses that are exposed to nature-related physical risks (total and proportion of total).
A9.0		Transition risk	Value of assets, liabilities, revenue and expenses that are exposed to nature-related transition risks (total and proportion of total).
A10.0			Description and costs related to loss of operating areas.
A11.0	Transition risk – Liability		Description and value of clean-up costs due to nature-related impacts.

Metric no.	Risk / opportunity	Category	Metric	
A12.0	Transition risk - Market Risk Transition risk - Reputation	Transition risk	Description of exposure to/costs related to loss of market access.	
A12.1		Description of exposure and costs related to raw material and natural resource price volatility.		
A13.0			Exposure to increased operational costs/loss of revenue due to reputational risks.	
A14.0		Transition risk – Technology	Expenditure on R&D for new and alternative technologies related to mitigation and adaptation of nature-related risks.	
A15.0	Opportunity	Market	Year-on-year change in ESG rating scores for previous three years.	
A16.0		Capital flow and financing	Value of green finance instruments used, such as green bonds and sustainability-linked bonds.	
A17.0		Resource efficiency	Value of operational cost savings associated with nature-related management, such as improvements in efficiency of use of nature-related resources and adoption of circular economy practices.	

Table II.5: TNFD additional global disclosure metrics for responses to nature-related issues

Metric no.	Category	Subcategory	Metric	
A19.0			Proportion of targets that are time-bound and quantifiable.	
A19.1		Policies, commitments and targets	Proportion of targets that address short term, medium term and long term risks and opportunities.	
A19.2		Engagement	Proportion of geographical sites/priority locations that are covered by targets.	
A20.0	Strategy		Proportion of sites that have active engagement with local stakeholders on nature-related issues.	
A20.1	Strategy		Participation in sector-wide and/or multi-stakeholder agreements (number of agreements; number of stakeholders and stakeholder groups covered).	
A21.0	Capital allocation/	Value of investment in projects that avoid or reduce negative nature impacts or conserve or restore ecosystems or species where impacts cannot be avoided.		
A21.1		investment	Investment in nature-related solutions as defined in relevant government or regulator green investment taxonomy.	

Metric no.	Category	Subcategory	Metric
A22.0		Value chain	Proportion of suppliers screened on nature-related issues, by spend and/or volume.
A22.1			Proportion of suppliers engaged for priority nature issues identified and/or when assessing nature-related issues, by spend and/or volume.
A22.2	Dependency, impact, risk and opportunity management		Credible and transparent third-party certification: percentage and/or value of production, consumption and sourcing of raw materials, per certification type.
A22.3	management		Proportion of production, consumption and sourcing of raw materials that is traceable to original location.
A22.4			Proportion of suppliers committed to and effectively implementing sustainable production.
A23.0			Proportion of sites producing and effectively implementing nature action plans.
A23.1			Rate of reuse and recycling of i) waste or ii) product/material outflows (%).
A23.2	Dependency, impact, risk and opportunity impact): mitigation hierarchy steps	_	Restoration of negatively affected species and ecosystems (investment and extent (km²)) split into ecosystem/biome type and split into: Required by regulation; Required by certifier; and Voluntary.
A23.3		impact): mitigation	Extent (km²), duration (years) and monitoring frequency (count/year) of ecosystem restoration and/or species restoration projects.
A23.4			Circular material use rate (%).
A23.5			Value of operational/capital expenditure, categorised into mitigation hierarchy actions (avoid, reduce, restore and regenerate, transform) by value and/or proportions (%).
A23.6		Mandatory credit market schemes: Value of total biodiversity offsets purchased and sold by type and scope (geographies, activities).	

Metric no.	Category	Subcategory	Metric
A24.0			Value invested in voluntary ecosystem and/or species restoration.
A24.1			Extent (km²), duration (years) and monitoring frequency (count/year) of voluntary ecosystem and/or species restoration projects.
A24.2		Voluntary conservation, restoration and	Value of investment in additional conservation actions split into type of action and type of ecosystem/biome applied to.
A24.3	Dependency,	regeneration	Value of investment in nature-related community development programs intended to enhance positive impacts for Indigenous Peoples and affected stakeholders.
A24.4	opportunity		Voluntary credit market schemes: Value of total biodiversity offsets purchased and sold by type and scope (geographies, activities).
A25.0			The level(s) at which the assessment is taken (corporate, location-specific and/or project/service-line-specific).
A25.1			Percentage of direct operational locations assessed.
A25.2			Percentage of operational locations assessed upstream and downstream.
A25.3			Percentage of suppliers engaged on access to and availability of high-quality data.
