IFC's Impact in Water Infrastructure

More than a quarter of the world's population lacks access to safe drinking water. In many countries, the existing water infrastructure provides neither comprehensive sanitation services nor adequate wastewater treatment. With climate change affecting the availability of water and regional ecosystems threatened by polluted wastewater, financing the expansion of water infrastructure is more important than ever. Water service improvements are complex and expensive. IFC works with clients to build innovative, market-oriented, and long-term solutions to water infrastructure challenges.

Water portfolio

\$547 million Water investment and mobilisation as of July 2024

By region over the past 15 years

Over the past 15 years, IFC invested and mobilized over \$3.8 billion in water infrastructure.

Our approach

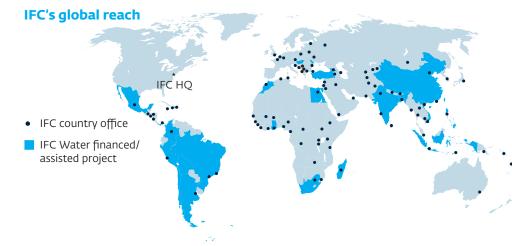

IFC works to provide comprehensive solutions for all its clients. IFC offers advisory and investment services, as well as access to concessional finance and guarantees. We have the advantage of being able to collaborate closely with colleagues across the World Bank. IFC can work with private sector companies, public-owned water utilities, and municipal and regional governments.

The IFC difference

- The <u>Utilities for Climate (U4C)</u> initiative offers access to IFC's investment products, advisory services and a knowledge-sharing global network for participating utilities. U4C can support clients in areas such as preparation of climate change action plans, non-revenue water reduction, energy efficiency and improved sludge management. Learn more at www.ifc.org/U4C.
- We offer a broad range of financing products, including debt, mezzanine, and equity, in a variety of currencies. We can also support projects with equity at the early development stage.
- IFC's in-house experts can assist with the structuring and tendering of concessions. We can also help manage technical, environmental, and social risks, and identify opportunities for growth and efficiency.
- IFC's <u>Scaling ReWater</u> program can help clients as they develop wastewater treatments or plan for the reuse of existing infrastructure while mobilizing public, private, and concessional capital. Learn more at <u>www.ifc.org/ScalingRewater</u>.

About IFC

- World's largest development institution focused on the private sector in emerging markets
- Member of the World Bank Group with over 60 years of experience
- Impact investor and mobilizer of capital for sustainable development
- Leader in climate finance and green growth
- Trusted AAA-rated partner transforming innovative ideas into impactful investments
- Provider of advisory services for developing bankable projects, structuring publicprivate partnerships, and improving business environments
- Upholder of world-class ESG standards to ensure sustainable and responsible investments
